No trades fall in this window, so there is nothing to measure. A win rate over zero trades is not a fact about the model, and it is not printed as one.

Model quality

Whether the probabilities the bot priced on were worth believing.

MEASURE	VALUE	WHAT IT MEANS
Brier score	0.1435	Mean squared forecast error. 0.2500 is what always saying 50% scores.
Mean claimed edge	19.81%	What the model asserted at order time, averaged over settled trades.
Realised return	+39.14%	What the book actually paid, per dollar staked.

A large claimed edge beside a smaller realised one is the signature of a model priced against the wrong reference. That gap is what the divergence gate exists to catch, and it is the number to watch as the sample grows.
